PlantVisorPRO FAQ

Object: Installing the PVPRO Demo

PVPRO DEMO 1.5 or later

- 1) Download PVPRO Demo from KSA (all Antivirus warning must be ignored).
To do this, you need to register on KSA and be enabled to access the PVPRO Demo area. If not enabled, contact us (cst@carel.com or pvcustomer@carel.com).
- 2) Create the *C:\Temp* folder and save the .zip file on *C:\Temp*.
- 3) Unzip the file in *C:\Temp* and then double click the **starter.bat** file.
- 4) After that all the necessary files will be copied to *C:\PVPRODEMO* and the *PlantVisorPRO Locale Demo shell* is automatically opened.
The command shell is started by the **StartDemo.bat** file (located in **C:\PVPRODEMO**): so you can create a shortcut to that file in the Desktop in order to easily launch or install PVPRO Demo:

- 5) **Install PVPRO Demo**: select **Setup Demo** and click **Run** (as shown in the following figure):
