

## BD80F and BD250GH

### Discontinued Electronic Unit

<b>Date</b>	April 28 <sup>th</sup> 2009.	<b>Code numbers</b>	The existing products have the code numbers: 101N0280 single pack 101N0281 industrial pack (28 pcs.) The new replacement products have the code numbers: <b>101N0290 single pack</b> <b>101N0291 industrial pack (28 pcs.)</b>
<b>Introduction</b>	We are pleased to announce that we are introducing a new and improved electronic unit for compressors BD80F, BD100CN and BD250GH. The existing electronic unit for these compressors will be discontinued.	<b>Prices</b>	The prices for the new electronic unit will remain unchanged compared to the old one.
<b>Background</b>	<p>The main reason for upgrading the electronic unit was to make it able to run 12V DC at HBP condition together with BD250GH compressor. Feedback from the market showed that the BD250GH had difficulties to run HBP in 12V DC systems.</p> <p>At the same time we have improved the starting capabilities of all the involved compressors. We allow a higher current draw during start up of the compressors.</p> <p>All other specifications for the electronic remain unchanged.</p>	<b>Stock</b>	If there is stock of the old units locally at the Danfoss Sales Companies it will not be necessary to return units for upgrade. As long as the electronic is used in MBP and LBP applications there will be no problem using the old electronic unit.
<b>Compressors</b>	The electronic unit is used with compressors BD80F, BD100CN, BD250GH and BD250/250GH. Specifications and code numbers for the compressors remain unchanged.	<b>Literature</b>	The relevant literature for compressors BD80F, BD100CN and BD250GH will be updated with the new code numbers and eventually changed specifications at the next planned revision.
<b>Valid from</b>	The new electronic unit has already been released and stock is available.	<b>Further info</b>	Please get in touch with your Danfoss contact if any further information is needed.
